

Chem/Bio Mini Push Pack Sampling Kit

QuickSilver is introducing the Chem/Bio Mini Push Pack Sampling Kit. These kits are portable, all-in-one units that contain the tools and supplies needed to take one sample per pack of a liquid, solid, wipe or biological sample. All the components are heat sealed into a one-piece unit and the heat seal is notched for easy opening. Each pack is wrapped inside a non-slip, absorbent liner for which you can lay out the sampling components for ease of use. Each pack is held together with a color-coded Velcro strap to differentiate each type of sampling pack and for easy opening. The Mini Push Packs are similar to the interior modules of the Chem/Bio Sampling Kit, except the pack allows you to take only one sample at a time. Once sampling is complete, all the waste can be placed on the absorbent liner, rolled up, tied with the Velcro, for quick and easy disposal. The Mini Push Pack Kit is also available for training purposes, which contains non-cleaned items.
