

## QS Molle Vest CB Sampling Kit ( DUAL USE)

The QSA VES 500 Molle Vest Chemical and Biological Sampling Kit is equipped and designed for the warfighter. All the required, unique sampling tools and equipment needed in a strategic environment are included. Each pouch is compartmentalized for ease-of-use and segregated by sampling type, e.g., liquid, solid/wipe, administrative supplies, etc. All sampling tools are dual use, effective for both chemical and biological samples.

QSA VES 500

Weight – 10 lbs.

### Dual use offers:

- Ease of use
- No differentiation among tools
- All items that come in contact with the chemical sample are either purchased pre-cleaned and/or are cleaned/screened for over 10 chemical warfare-related compounds in an ISO 9001:2000 registered laboratory and the tools are also sterile for biologicals.
- Analytical results (Test Reports) are maintained by an ISO registered laboratory
- Certificates of cleanliness and sterility are maintained by QuickSilver Analytics
- Each sampling tool has a unique identifier which is traceable to a lot number or production number

The individual pouches are serialized for tracking and reach-back capability. The pouches can be assembled and attached on an as-needed basis – designed to fit the mission. Pouches can be sold separately and are easily attachable to any Molle Vest. The sampling vials and syringes are Teflon® for sample compatibility.

The QSA VES 500 Vest offers different sampling vial sizes to accommodate any sampling need or environment.

QuickSilver will configure the QSA VES 500 to your specific sampling needs.
